

CAR SHIPPING CHECKLIST

GET YOUR CAR READY FOR TRANSPORT:

- Be Prepared** - Make sure you have a valid photo ID; the carrier will request this upon pickup.
- Remove Personal Belongings** - Remove any personal belongings or valuables from your vehicle.
- Fuel** - Make sure your car has no more than a quarter tank of gas when it is picked up. There also must be enough gas for your driver to drive the car on and off the carrier. The closer to a quarter tank, the better.
- Clean Exterior** - Cleaning your vehicle will ensure a thorough inspection can be completed.
- Fluid leaks** - Make sure you don't have any leaking fluids that may cause issues during transport.
- Charged Battery** - Ensure you have a fully charged battery, if not get a new one. You may run the risk of an additional fee for your vehicle being "inoperable".
- Inflated Tires** - Check that your tires are completely inflated and that there aren't any leaks so there won't be issues unloading your vehicle upon delivery.
- Disable Alarms** - If possible, disable all alarms that may cause issues for the transporter if triggered.
- Toll Tags** - Make sure to remove or deactivate any toll devices to ensure you are not charged for tolls while your car is in transit.
- Car issues** - Inform the carrier if your vehicle has any specific issues with turning on or shifting gears. This will ensure the driver can easily load and unload your car on and off the truck.
